Concussion Protection & Anti-Vibration

SoftWall is designed to absorb the concussion of a horse's kick, protecting its legs, joints and tendons from the force associated with this vice. SoftWall also acts as a sound dampener and many horses cease to kick their stalls as the "loud bang" is eliminated.

Safe For Horses

SoftWall is safe as there are no hooks required to hang it on. There are no small pieces to dislodge as the foam slabs are covered by our durable & waterproof. All the materials used in SoftWall are hypo-allergenic.

Anti-Casting

If your horse is kicking at the walls to get up, the SoftWall System will aid by helping the horse to "get a grip" and push away from the wall, instead of its hoof slipping on a hard surface.

Foaling Stalls

With the wabbling legs of the new born foal, SoftWall protects them if they fall into the wall head first. It also helps to insulate the stall keeping it warmer at foaling time, especially in the colder climates.

Recovery Stalls

SoftWall is ideal in veterinary clinics and hospitals by offering protection to sick and recovering horses. SoftWall is very easy to clean and disinfect.

Application

The SoftWall System is light weight and easy to install and does not take up much space in the stall. Since SoftWall is attached to the walls with the protective top cover which is fastened to the walls it cannot be torn down by the horse and will not shift with repeated concussion.

Trailerling

Used on the floor of your trailer SoftWall creates a seamless wall to wall anti-vibration system relieves the strain on your horses legs & tendons. Less fatigue after travel means better performance. It is easy to clean after travel...no more pulling out contaminated heavy mats.

Installation

SoftWall is light weight and easy to install. You can customize SoftWall from one wall to all four in your horses stall. What ever height or length SoftWall will accommodate.

Height & Width

First determine the height and width you require your horses stall.

Frame the are with 2"x2" pressure treated or plastic wood. Next fit the SoftWall Slabs into that frame. Take the SoftWall Cover and using the supplied plastic strips...fasten the top cover to the wood frame via screws. Trim off the excess top cover and you are done. Repeat the same steps with the other walls. There will be no exposed wood if you wrap the cover over the top surface of the 2"x2" then fasten.

With horse trailer floors, frame the perimeter of the trailer floors or the desired areas you wish to cover with the pressure treated or plastic wood. Lay in the SoftWall Foam Sheets and then secure the SoftWall cover with the plastic strips and screws. Trim of the excess.
